

AMIN ALBOOYEH

Software Engineer | Backend Systems & Distributed Architecture

Turin, Italy | amin.albooyeh@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Software engineer with 8+ years building production Python systems across edtech, fintech, and data platforms. Designed and shipped microservice architectures handling concurrent async workloads with FastAPI, Celery, and RabbitMQ. Held architecture ownership in senior roles: drove system design decisions, enforced code quality through structured review cycles, and developed junior engineers to mid-level. Deployed and operated infrastructure on AWS and Kubernetes in multi-environment production setups. M.Sc. candidate at Politecnico di Torino; B.Sc. from Amirkabir University of Technology.

TECHNICAL SKILLS

- **Languages:** Python (Advanced), SQL, Bash
- **Frameworks:** FastAPI, Django, Flask
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch
- **DevOps / Infrastructure:** Docker, Kubernetes, AWS, Azure, Linux, Git, GitHub Actions, GitLab CI
- **Async / Messaging:** Celery, RabbitMQ, Amazon SQS
- **Architecture:** Microservices, Clean Architecture, ETL pipelines, REST API design
- **Testing:** Pytest, integration testing, performance profiling

WORK EXPERIENCE

Senior Software Engineer (Python)

Jul 2024 – Dec 2025

Quera · Tehran, Iran · Remote

- Architected async task pipeline using FastAPI, Celery, and RabbitMQ to process high-volume background jobs; decoupled ingestion from execution across distributed workers, eliminating blocking bottlenecks under concurrent load.
- Owned cloud infrastructure across AWS and DigitalOcean: containerised all services with Docker, orchestrated with Kubernetes, and automated deployments via GitHub Actions and GitLab CI — reducing manual release steps to zero.
- Deployed Elasticsearch for full-text search across the platform; tuned PostgreSQL query execution plans and Redis caching strategies to cut read latency under peak traffic.
- Ran weekly architecture reviews and served as primary code reviewer for a 5-engineer team; introduced PR conventions that reduced post-merge regressions.

Stack: Python 3, FastAPI, Django, PostgreSQL, Redis, Elasticsearch, Celery, RabbitMQ, Docker, Kubernetes, AWS, DigitalOcean, GitHub Actions

Software Engineer (Python)

Nov 2022 – Jun 2024

Rahpooyan Gostar · Tehran, Iran · Remote

- Rebuilt backend of internal service platform from a monolith into independently deployable REST services, improving deployment cadence and isolating failure impact across teams.
- Designed ETL workflows integrating PostgreSQL, MongoDB, and Redis to consolidate operational data from three source systems into a unified reporting layer.
- Profiled and resolved slow queries across PostgreSQL and MongoDB under production load; introduced targeted indexing that cleared throughput bottlenecks flagged by ops.
- Led weekly technical reviews and brought two junior developers through their first solo production deployments.

Stack: Python 3, Django, FastAPI, PostgreSQL, MongoDB, Redis, Docker, Linux, CI/CD

Python Software Engineer

Mar 2018 – Dec 2019

Technoarch Softwares · Tehran, Iran

- Built RESTful APIs and microservice components with Django and Flask for client-facing products.

- Wrote ETL automation scripts to extract, clean, and load data across PostgreSQL, MySQL, and MongoDB, replacing previously manual migration steps done in spreadsheets.
- Introduced Docker-based local development environments and contributed to CI/CD pipeline configuration for automated test execution on every push.

Stack: Python, Django, Flask, PostgreSQL, MySQL, MongoDB, Docker, Git

Python Developer

Oct 2016 – Feb 2018

Pishgaman Fanavari Etelaat (ICT) · Tehran, Iran

- Developed REST APIs with Flask using OOP design patterns on an Agile team shipping fortnightly releases.
- Wrote unit and integration tests with Pytest; maintained test coverage above 80% on core API modules.
- Managed source control workflows via GitLab and containerised development environments with Docker.

Stack: Python 3, Flask, PostgreSQL, Docker, Pytest, GitLab

Data Engineer (Junior)

Aug 2014 – Sep 2016

Rahkaran Information Systems · Tehran, Iran

- Built ETL pipelines with Python (pandas, numpy) to extract and load operational datasets into PostgreSQL and MySQL, automating reporting tasks previously handled manually.
- Cleaned and normalised data from inconsistent source formats, producing structured outputs consumed by business operations teams.

Stack: Python, pandas, numpy, SQL, PostgreSQL, MySQL, Git

Field / Mud Engineer

Sep 2012 – Jun 2014

National Iranian Drilling Company (NIDC) · Ahvaz, Iran

- Monitored drilling fluid systems on active rigs and logged operational metrics into SQL-backed reporting tools; maintained data accuracy under high-pressure field conditions.

Stack: Excel, AutoCAD, SQL

EDUCATION

M.Sc. Petroleum Engineering

2021 – 2025

Politecnico di Torino · Turin, Italy

B.Sc. Petroleum Engineering

2005 – 2010

Amirkabir University of Technology (Polytechnic Tehran) · Tehran, Iran
